Network and Systems Architecture

simplifying IT

In the modern workplace, it is imperative that technology works both effectively and reliably. To remain competitive, businesses install sophisticated computer networks and set up more complex intranets and websites. Keeping a computer network running smoothly is essential to almost every organization.

Because so much business is carried out over computer networks, security is an important issue for businesses and other organizations. Although software developers continue to improve their products to remove vulnerabilities, attackers are becoming ever more complex in their methods, viruses, and other attacks.

Organizations need to understand how their systems are vulnerable and how to protect their infrastructure, data and Internet sites.

When a company builds a new building, they hire an architect.

The architect is a trained professional who is central to the development of both the planning and the design components that form the basis for the construction of a building.

Once a design is accepted by the client, the architect usually continues to be associated with the building project, all the way through to completion. Serving as part of a design team that includes construction professionals, the architect will work to ensure that the original design is carried through to the finished product, with no alterations in materials or design that would lead to safety issues or compromise the quality of the building.

IP Pathways experienced and certified Technology and Data Storage Consultants can help you architect IT solutions that meet your business needs.

Methodology

Methodology is the way in which information is found or something is done. The methodology includes the methods, procedures, and techniques used to collect and analyze information.

IP Pathways' methodology is the core of our business. We believe that information and understanding are keys to a successful relationship with any IT services provider.

Our Technology and Data Storage Consultants come to your site and conduct interviews and assessments. We listen hard and work harder so we understand your initiatives, goals and obstacles.

Our Technology Consultants will then present all documentation and review with you any recommendations to develop a successful IT network, system or data storage strategy.

Who We Are

IP Pathways is a leading Iowa-based IT services provider - delivering innovative, cost-effective and manageable IT consulting advice and support.

We've established strong partnerships with the leading manufacturers in the industry to combine our systems design and professional services expertise to deliver best-in-class technology to suit your business needs and budget. Whether you are looking for computer networking, data protection and storage, IT help desk or disaster recovery solutions, IP Pathways is a valuable and proven resource.

Our customers partner with IP Pathways for a wide range of professional services from architecture to implementation to day-to-day support. We have an impressive team of experienced and certified Technology Consultants, all with real-world experience in corporate IT environments.
