Desktop Virtualization Services From IP Pathways

simplifying IT

The desktop of the future will not be a single physical device but a collection of different devices and environments. Applications and data may be located across a combination of locations for example: a virtual desktop running on a server, a home notebook computer and a webmail account. End users want the same view regardless of what device they use to connect to their desktop or where their applications and data are located – the user wants a universal client. IT organizations on the other hand want to simplify management and take control of desktops and applications cost effectively. Universal client is the next evolution in desktop computing including virtual desktop infrastructure.

Decouple applications, data, and operating system from the hardware and deliver them to the user rather than a device. Give users a personal view of their applications and data, whether they're on a thin client or laptop, in the office or on the road. Intelligently deliver applications and data to any device and allow users to focus on their jobs rather than the tools. Balance the requirements of your business with the needs of your users and create a seamless experience where applications and data follow the user and not the device.

VMware View

- Build The Desktop of Tomorrow, Today
- Give Users a Personal View of Their Data and Applications
- Deliver Personalized Applications and Desktops To A User, Not A Device
- Centrally Manage and Secure User Desktop Environments

VMware View - The New Virtual Desktop

Just as virtualization transformed servers in the datacenter, VMware View is transforming the desktop from device-centric to user-centric. These powerful solutions let you:

- Enable end user desktop flexibility with centralized IT control
- Simplify application, and OS management through a combination of application and desktop virtualization
- Reduce the cost of desktop management while increasing security
- Increase IT agility through faster desktop provisioning, management, and access

IP Pathways And VMware

IP Pathways is a VMware Enterprise partner and offers a full range of services including:

- Pre-Sales Engineering
- Procurement
- Implementation
- Post-Implementation Support
