

Replication-as-a-Service

Built on NetApp FAS architecture for NetApp FAS customers.

We protect your NetApp FAS storage system in a way that meets the needs of your growing business. We eliminate the need to purchase an offsite NetApp FAS and offer offsite replication delivering a predictable monthly operating expense.

The Service

- Replication from your NetApp FAS 7-Mode or cDOT storage system is configured to our cloud based NetApp FAS storage using SnapMirror® or SnapVault® NetApp software
- Seeding can be done via the network or by using a mobile NetApp FAS storage system and IP Pathways' Professional Service
- Connectivity can be via the Internet or private circuit
- Restores are provided by reversing replication traffic or by reverse-seeding in the event of a data loss
- Replication options include: Restore to colocated servers or to Infrastructure-as-a-Service in one of the IP Pathways data center
- Pay for resources consumed, per Mb, per month and data transfer is included

IP Pathways' Benefits:

NetApp Platinum Partner

Team of technical experts certified on NetApp technology

24x7x365 Engineering Support

Carrier-Grade Connectivity
